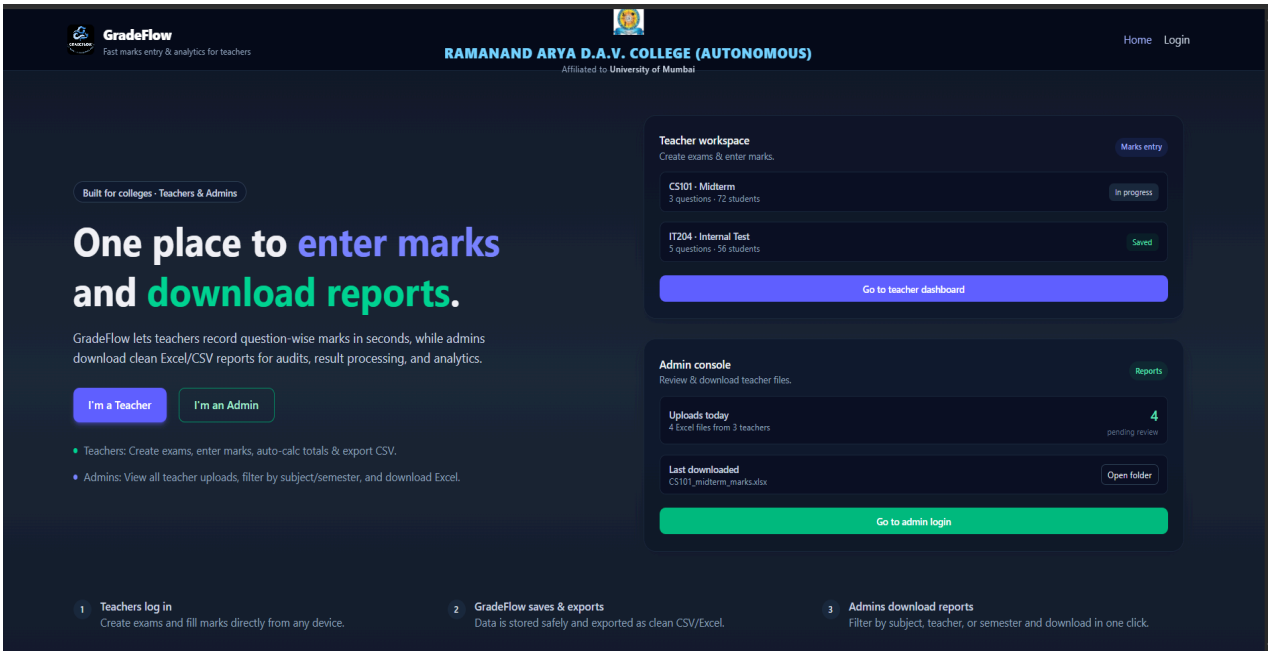
📘 GradeFlow – Teacher Instruction Guide

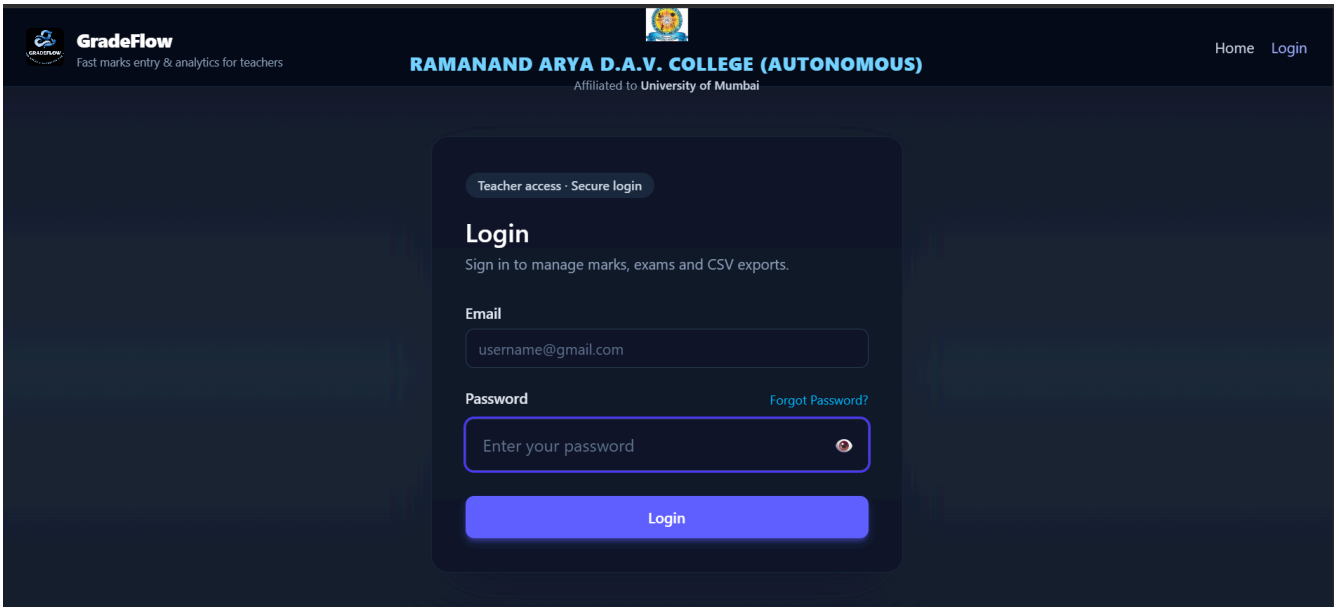
🔹 1. Home Page

This is the home page of the GradeFlow website.
From here, users can navigate to the login page and access the system.



🔹 2. Login Screen

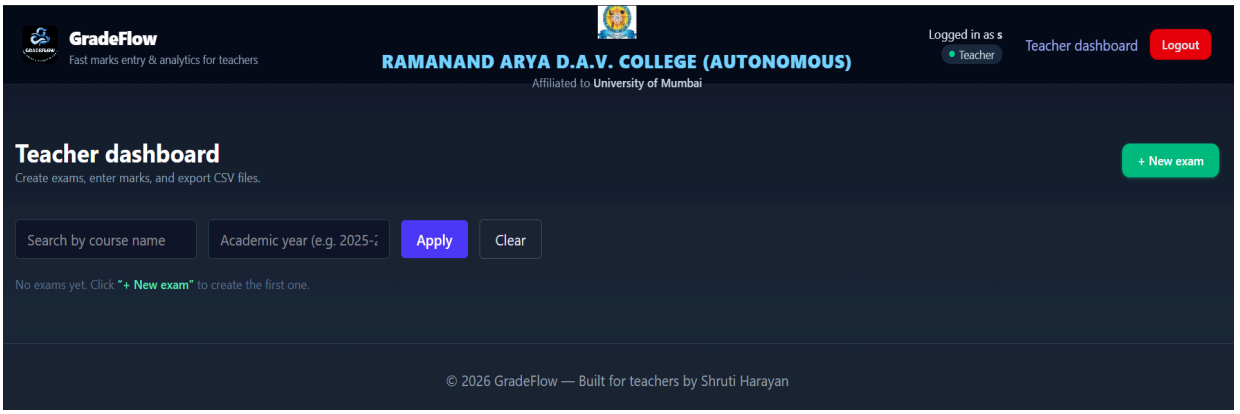
This is the GradeFlow login screen.
The system supports **role-based access** for teachers and administrators.
Teachers must log in using the credentials provided by the examination cell.



🔹 3. Teacher Dashboard

After logging in, the teacher dashboard is displayed.
Here, teachers can:

- View all their existing exams
- Create new exams
- Open marks entry
- Download exam reports



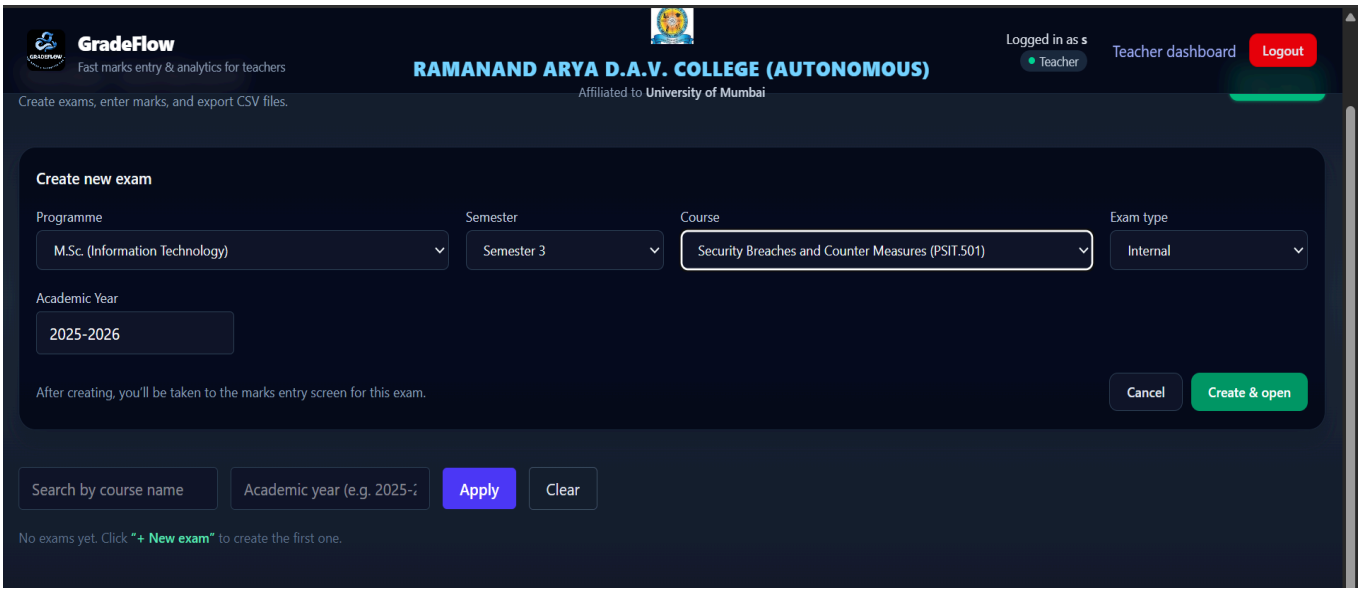
🔹 4. Create New Exam

To create a new exam, the teacher selects:

- Programme

- Semester
- Subject
- Exam type
- Academic year

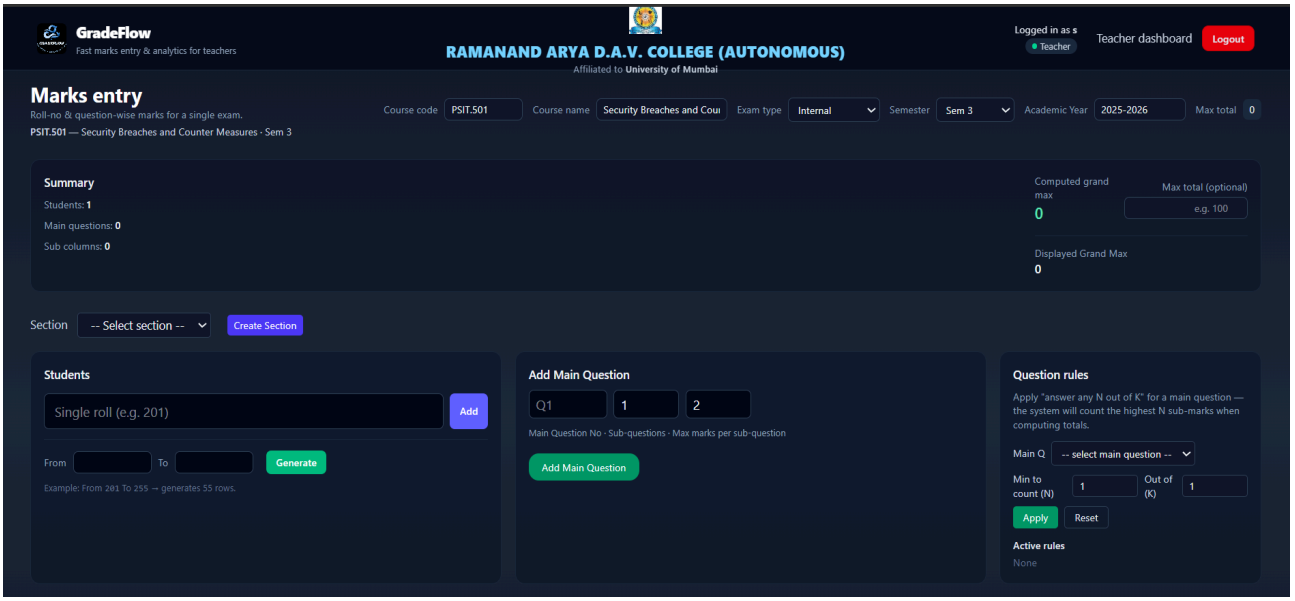
This ensures that every exam is created with proper academic structure and stored centrally.

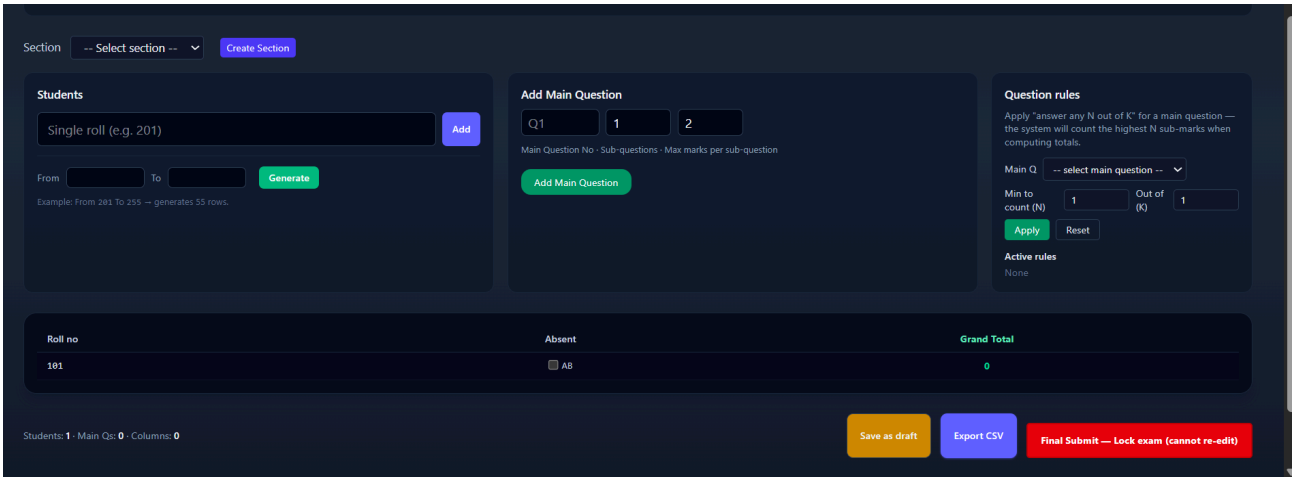


📘 MARKS ENTRY MODULE

🔹 5. Marks Entry Screen

This is the GradeFlow marks entry screen.
At the top, subject details and exam metadata are shown.
Below that, the teacher sets up sections, students, questions, and rules before entering marks.





👩‍🎓 STUDENT SETUP

🔹 6. Student Entry Methods

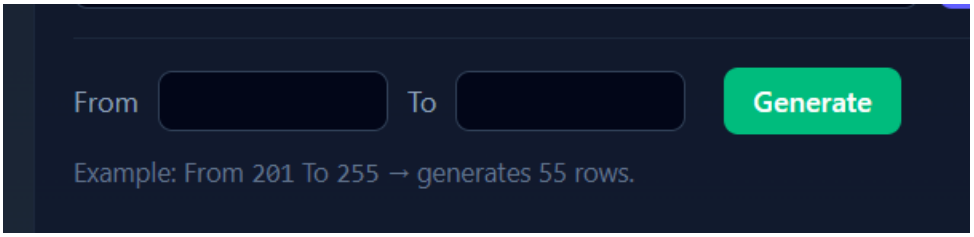
GradeFlow supports **three ways to add students**, allowing teachers to work according to their existing records.

🔸 METHOD 1 — Roll Number Range Generation

If the teacher has a full class list, they do not need to enter students individually.
They simply enter the starting and ending roll numbers and click **Generate**.

For example, if roll numbers are from **201 to 220**, the system automatically creates all rows instantly.

This saves time and prevents manual typing errors.



🔸 METHOD 2 — Section-Based Organization

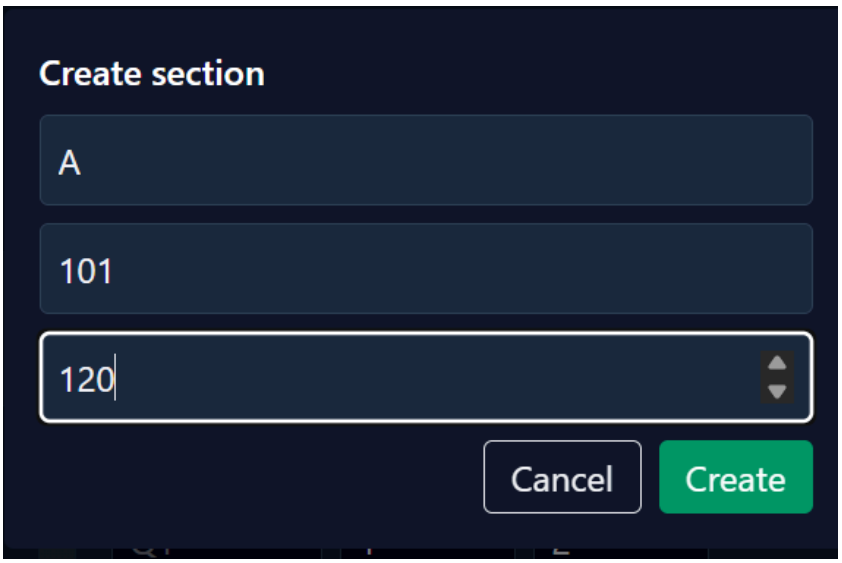
Here, the teacher selects the **section or division** of the class.
This allows marks to be managed separately for each class division, such as A, B, or C.

For example, Section A may contain roll numbers from **101 to 120**.
The system keeps sections separate so that attendance, roll numbers, and marks remain organized.

Since roll numbers belong to a specific section, the system stores them under that section. This helps generate section-wise reports and prevents mixing students from different divisions.

NOTE: Sections are optional.
They are used only when a programme has multiple divisions. For example BSc. IT with Section A and B, then the teacher should create students under the correct section.

If there is only one class, teachers can directly generate roll numbers without creating sections.



🔸 METHOD 3 — Single Roll Number Entry

If a teacher wants to add one student manually, they can enter a single roll number and click **Add**.

This is useful when:

- A new student joins late
- One record needs correction
- A student was missed earlier

🔹 Transition to Next Step

Once students are generated, the teacher defines questions, evaluation rules, and then enters marks.

📝 MARKS ENTRY & CALCULATION

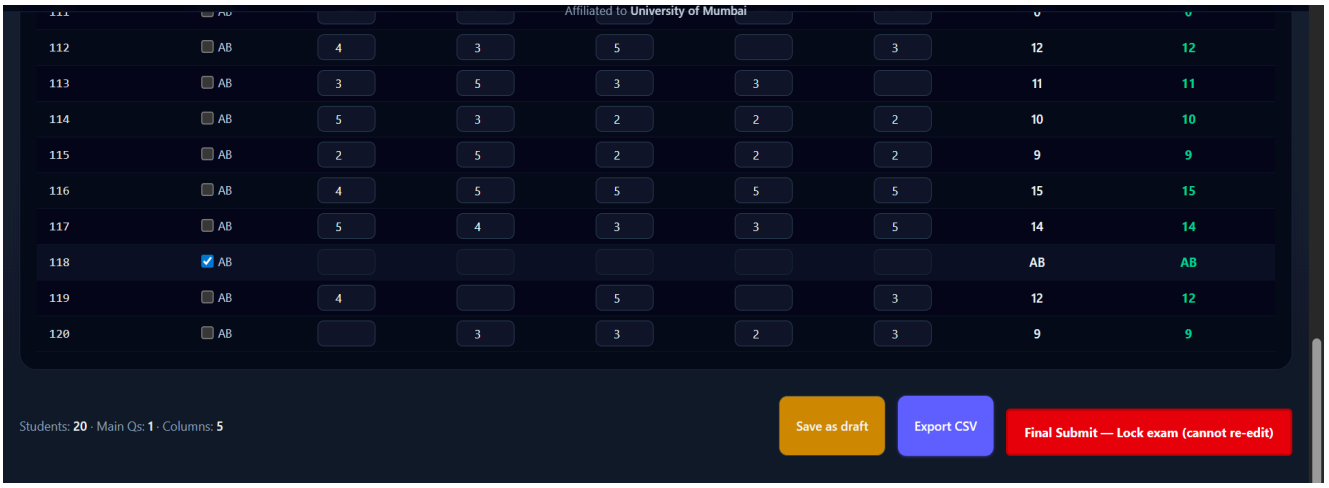
🔹 7. Entering Marks

As marks are entered, the system automatically calculates:

- Question totals
- Grand totals

No manual calculation is required.

If a student is marked **Absent**, the system handles it correctly without affecting totals.

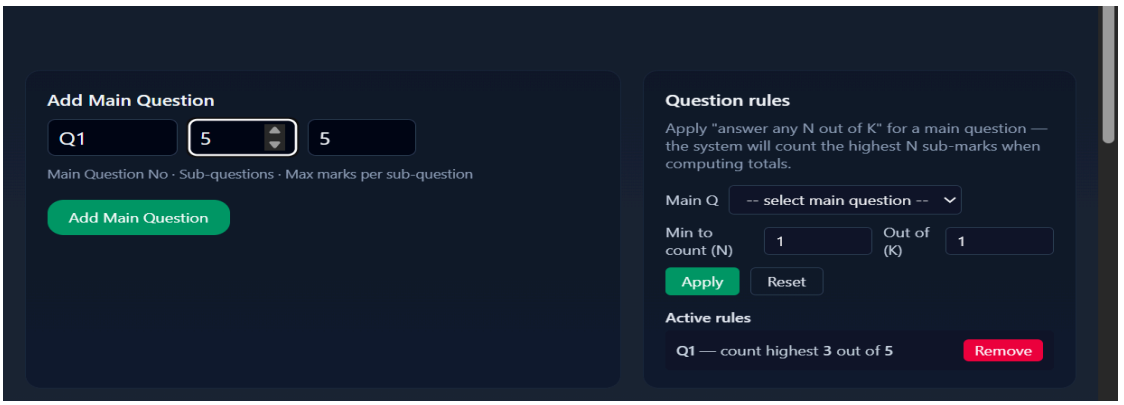


🔹 8. Rule-Based Evaluation (Best N Out of K)

GradeFlow supports rule-based evaluation such as **Best N out of K**.

For example, if only the best **3 marks out of 5** sub-questions should be counted, the system automatically selects them.

This removes the need for complex Excel formulas and ensures consistency across all students.



💾 SUBMISSION WORKFLOW

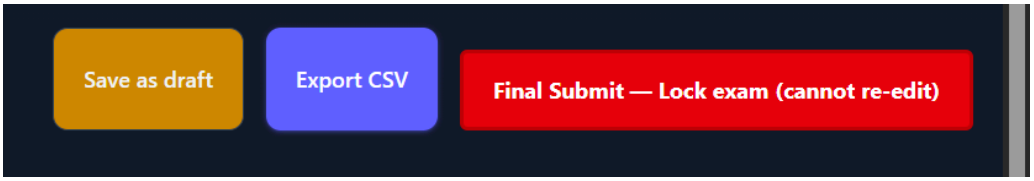
🔹 9. Draft vs Final Submission

Teachers can save marks as **Draft** and modify them multiple times.
Once verified, the teacher performs **Final Submit**.

After final submission:

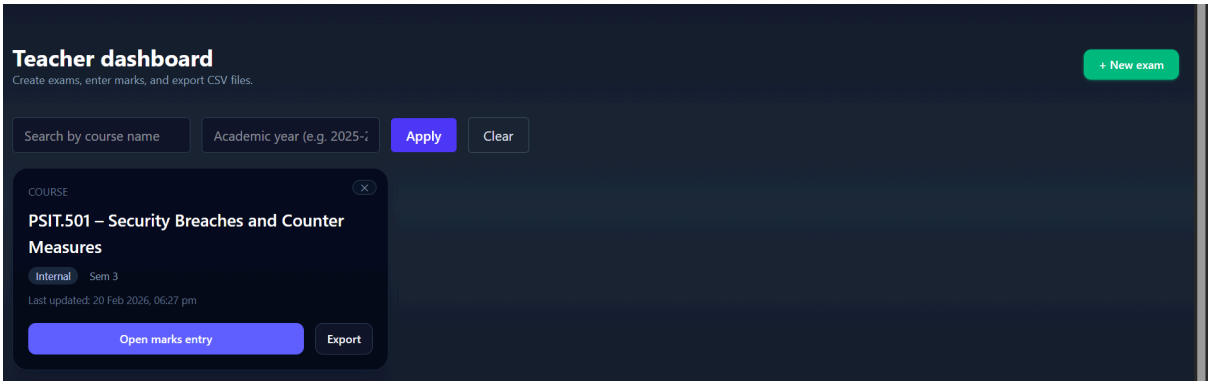
- Marks are locked
- Editing is disabled
- Teachers can still view data
- Excel reports can still be downloaded

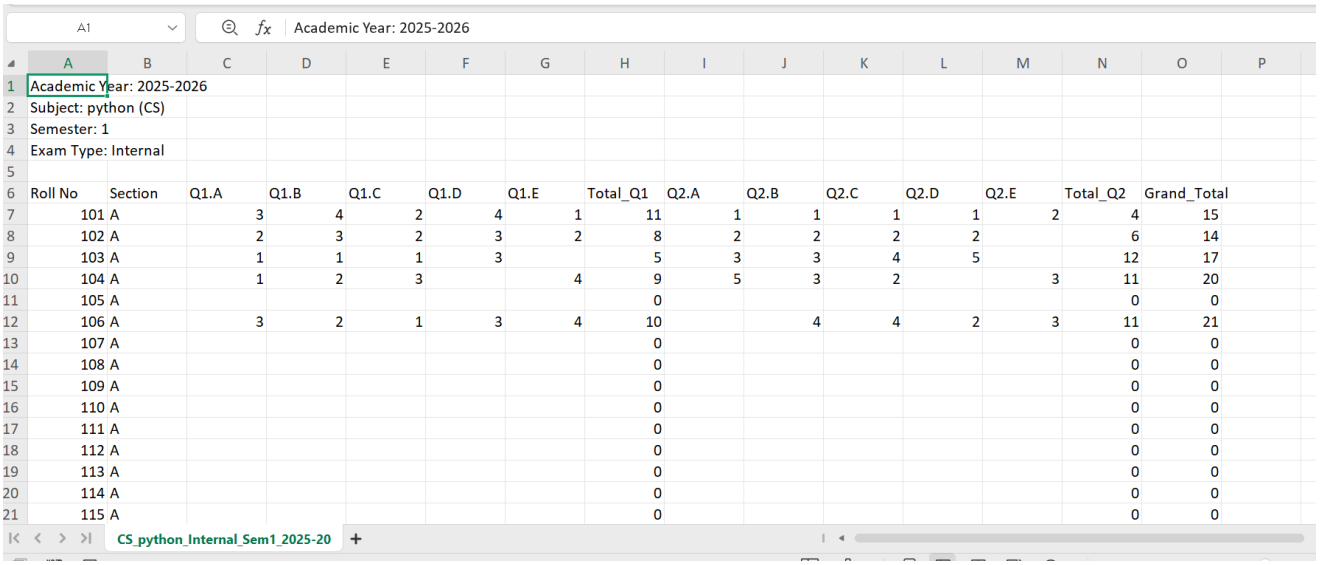
This prevents re-editing and eliminates multiple “final” Excel files.



🔹 10. Export Excel Report

Finalized marks can be exported as an Excel report.
This file contains structured, system-generated results ready for the examination cell.





A1 | Academic Year: 2025-2026

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P
1	Academic Year: 2025-2026

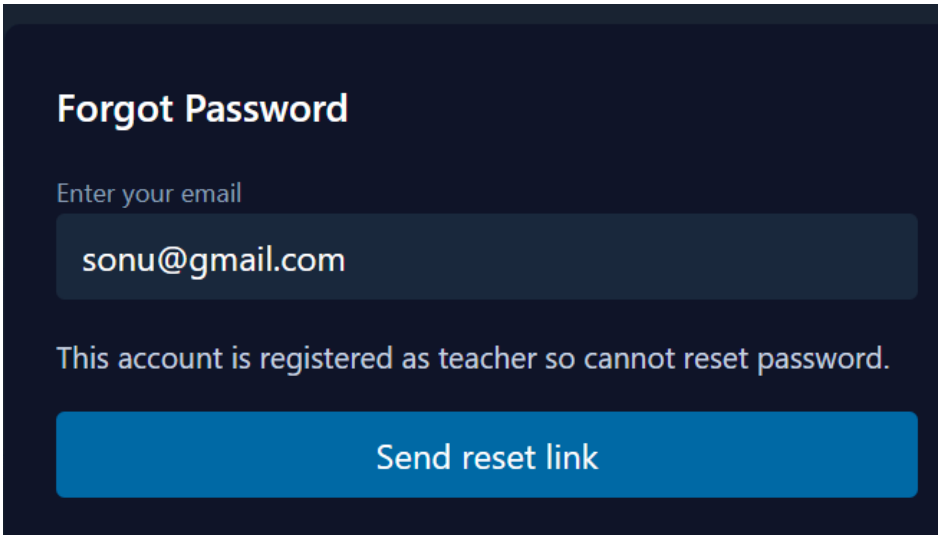
🔐 ACCOUNT & SECURITY FEATURES

🔹 11. Forgot Password (Admin Only)

GradeFlow provides password recovery only for **Admin accounts**.
Teacher passwords are controlled by the examination cell.

If a teacher forgets their password, they must contact the admin to reset it.

This ensures institutional security and prevents unauthorized access.



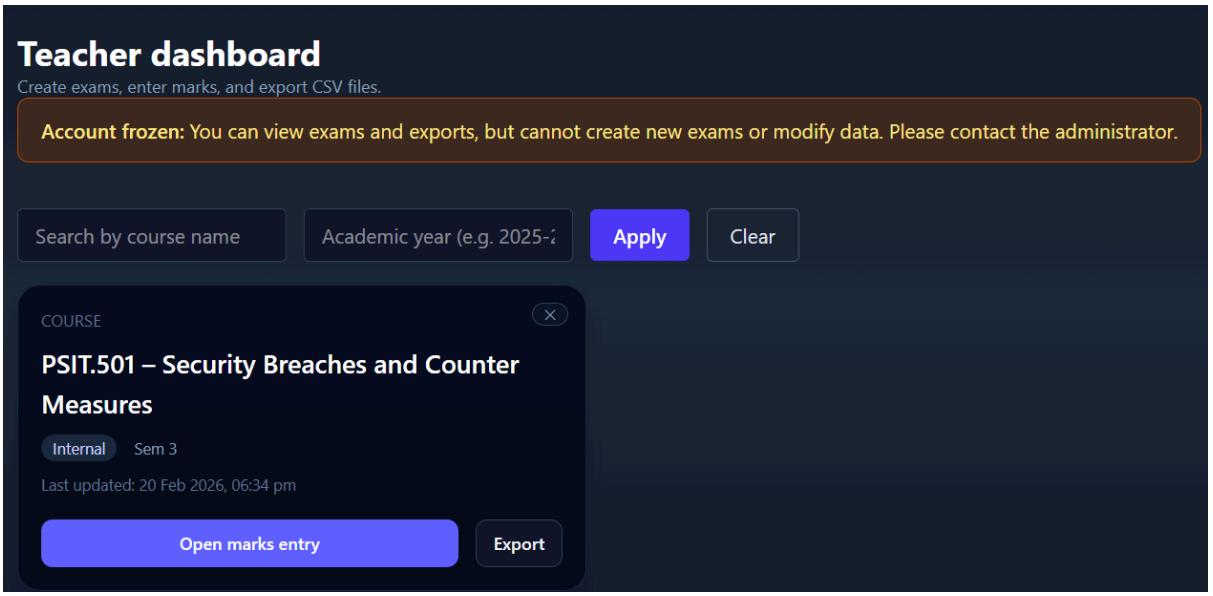
🔹 12. Teacher Account Freeze

The admin can temporarily freeze a teacher account when required.
This may happen after evaluation completion or during administrative review.

After freezing:

- Teachers cannot create or modify exams
- Teachers cannot enter or edit marks
- Teachers can still log in
- Teachers can still download Excel reports

This ensures the examination cell retains full control over mark editing.



🔹 13. Admin Locking an Exam

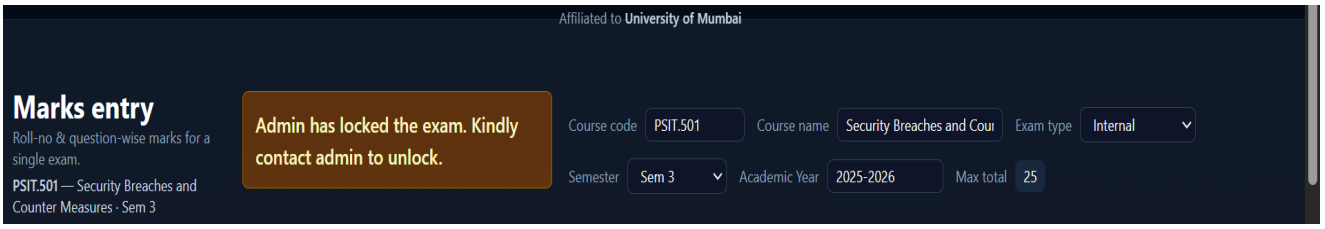
Once marks are finalized, the admin may lock the exam.

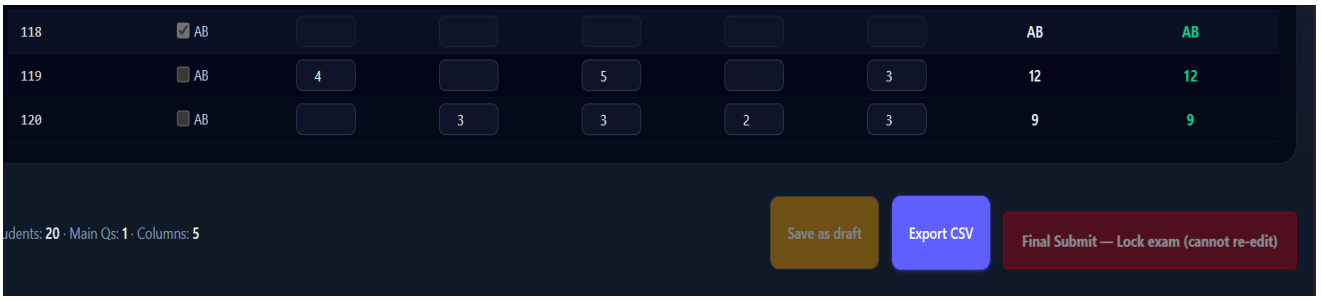
After locking:

- Teachers cannot edit marks
- Teachers cannot add students
- The exam becomes read-only
- Only Excel download remains available

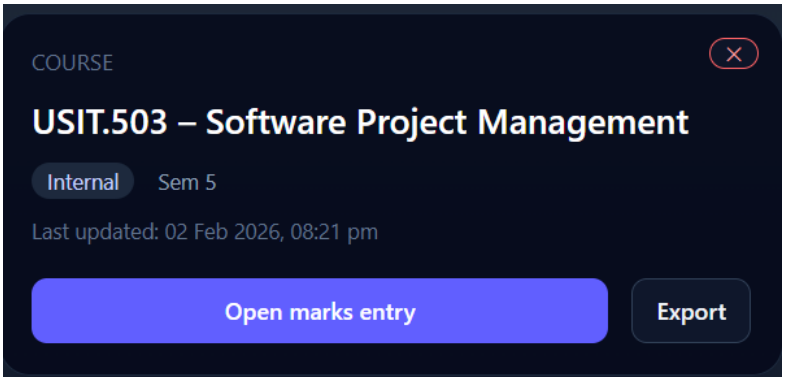
If corrections are required, the teacher must contact the admin to unlock the exam.

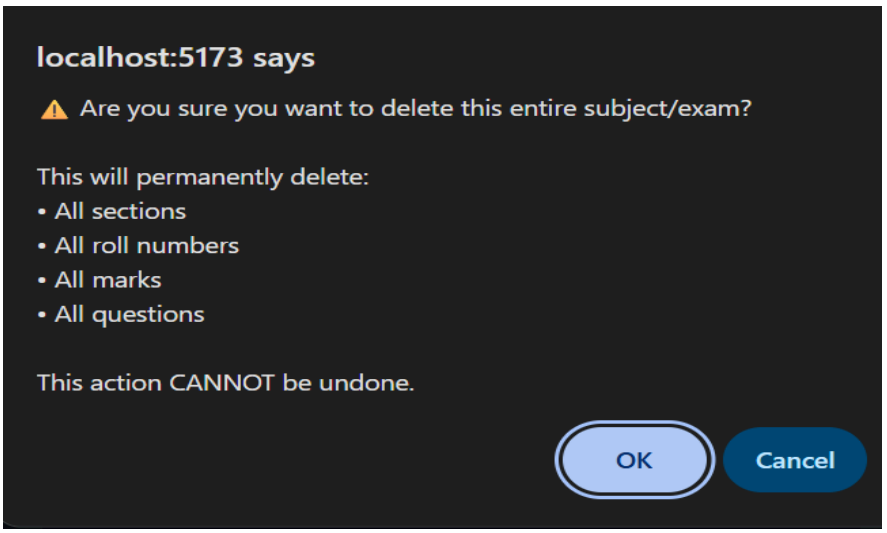
This ensures that only the examination cell controls when marks can be changed.





14. Delete Subject / Exam

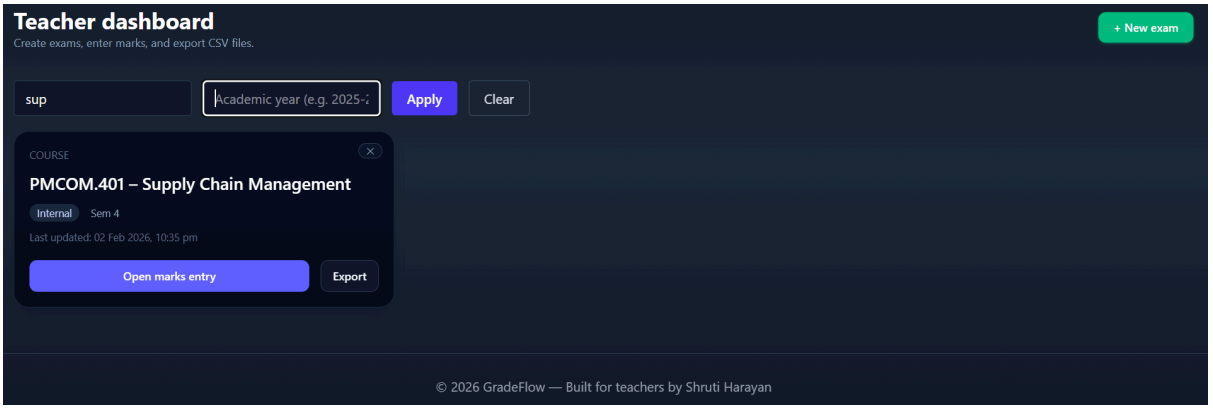




This feature allows a teacher to permanently delete a subject or exam from the GradeFlow dashboard.
When the delete option is selected, the system displays a confirmation message informing the teacher that all associated data — including sections, roll numbers, questions, and marks — will be permanently removed and cannot be recovered.

If the teacher confirms the action, the subject or exam is deleted completely from the dashboard and from the system records.

15. Filter by course name and academic year



This feature allows teachers to filter exams on the GradeFlow dashboard using the course name and academic year.
By entering a course keyword and selecting the academic year, teachers can quickly locate specific exams without scrolling through the entire list.

Clicking **Apply** activates the filter and displays only the matching exams.
Clicking **Clear** removes the filter and restores the full list of exams.

Exam Summary and Marks Calculation Panel

The Summary panel displays an overview of the exam structure and total marks calculation.

It shows:

- **Students** – total number of students added for the exam
- **Main Questions** – number of main questions created
- **Sub Columns** – total number of sub-question fields for marks entry

On the right side:

- **Computed Grand Max** – the total marks automatically calculated based on all questions and sub-questions
- **Max Total (optional)** – allows the teacher to manually enter the official paper total if needed
- **Displayed Grand Max** – the final total that will appear in reports and exported Excel files

This panel helps teachers verify that the exam structure and marks total are correct before submitting marks.
